

## Case Study: Jones Bell

CloudNine Concordance®

### HIGHLIGHTS:

CloudNine Concordance is the most mature, easiest and cost effective on-premise review platform in the global legal markets.

#### CUSTOMER PROFILE

The Jones Bell Law Firm (formerly Jones, Bell, Abbott, Fleming & Fitzgerald L.L.P) relied on the exceptional contributions of two paralegals to support the e-discovery work for the entire litigation portfolio handled by the firm.

### BUSINESS SITUATION

Needing to leverage the skills of limited paralegal resources, the firm empowered their staff to implement technology solutions to reduce the weight of their workload and give the firm greater control of skyrocketing cost.

### SOLUTION

The team realized the potential to expand the use of CloudNine Concordance to more effectively manage the e-discovery workflow.

Once all the processed electronic data had been loaded into CloudNine Concordance, the paralegal team would be able to work with their litigators to search, analyze, review, tag, and finally produce the responsive document set to opposing counsel.

### BENEFITS

The firm was able to create more databases in 6-months than they had previously accomplished in a full year. The contributions by the paralegal team were utilized with greater efficiency by relying on CloudNine Concordance and thereby increasing value to the litigators they support.

“

CloudNine Concordance provides us with a much faster document review process than we would otherwise have to navigate. The speed with which I can review electronic files inside of Concordance is just amazing.

”
