

SIMPLIFY EDISCOVERY WITH AN INDUSTRY PIONEER INNOVATING EVERY DAY.

Modern eDiscovery. Flexible Deployment. Predictable Cost.

In today's cost-conscious environment where deadlines are tight, data volumes continue to grow, and modern communication data such as email, chat, mobile, and cloud content dominate investigations you need technology that is powerful, flexible, and affordable. CloudNine delivers proven eDiscovery software and services backed by more than 20 years of experience supporting litigation, investigations, and regulatory matters. Whether deployed in the cloud or within your own infrastructure, our solutions are designed to reduce complexity, accelerate time to evidence, and provide complete control over workflow and budget.

SaaS: Automation of Import and Review at Its Finest!

CloudNine Review empowers legal teams to ingest, process, search, analyze, review, and produce both traditional and modern data quickly and securely within a scalable SaaS environment. Automated data ingestion and processing workflows streamline early case assessment and review preparation, while advanced search, filtering, and analytics tools help teams surface key evidence faster. Designed with an intuitive, self-service interface, CloudNine Review reduces reliance on IT resources while maintaining enterprise-grade security and flexible pricing aligned to matter needs. The result is a secure, modern review platform that moves teams from raw data to defensible production with speed and confidence.

eDiscovery On -Premise: Back to the Future

Your Environment; Your Control

For organizations that require data sovereignty, enhanced governance, or predictable annual budgeting, CloudNine offers powerful on-premise solutions that deliver performance and control within your environment.

CloudNine LAW: Reduce eDiscovery costs with the most versatile and comprehensive processing, scanning, imaging, and production solution on the market.

CloudNine Review On-Premise: Process, search, analyze, review, and produce traditional and modern data quickly and easily with our award-winning SaaS platform providing advanced workflows and modernized automated processing and review workflows in your environment.

CloudNine Concordance remains a trusted industry standard for in-house document review and production. It enables teams to import, search, review, and produce eDiscovery documents efficiently while maintaining an attractive and predictable annual licensing structure. Its efficient computing footprint and established workflows make it ideal for organizations managing review internally and seeking long-term cost stability.

CloudNine LAW provides a comprehensive solution for high-volume data processing, scanning, imaging, and production. Known for its versatility and reliability, LAW supports complex processing requirements while offering broad compatibility with downstream review platforms. Its powerful processing engine and flexible production options help organizations reduce overall eDiscovery costs while maintaining defensible workflows.

CloudNine Review On-Premise delivers the same modern processing and review capabilities as the SaaS platform but within your internal infrastructure. Organizations can process, search, analyze, review, and produce traditional and modern data with advanced automated workflows while maintaining full administrative control behind their firewall. This deployment option combines cutting-edge review functionality with the governance, security, and oversight many enterprises require.

CloudNine

For more than two decades, CloudNine has served the legal and investigations community with cost-effective, self-service technology built to address evolving data challenges. With flexible deployment options, modern data innovation, and a focus on accelerating time to evidence, CloudNine provides the right solutions to help organizations meet deadlines, control costs, and focus on what matters most: the facts.
