

NEW RELEASE ANNOUNCEMENT

Release Notes

October 2021

CloudNine LAW 7.6 and Explore 7.6

Demonstrating an on-going commitment to our law firm and corporate legal clients along with a national network of channel partners and service providers, CloudNine is excited to announce the new release of **CloudNine LAW** and **Explore, versions 7.6**. We are eager to learn your feedback as we strive to enhance the future of LAW and Explore.

Release Theme for LAW 7.6: New Turbo Imager and enhanced feature options provide on-demand scalability, improve workflow efficiency, and reduce resource dependency.

New, Turbo Imager Tool for Near-Native Document Imaging

- Turbo Imager will be offered together with Turbo Import licenses. For each license of Turbo Import, clients will also receive a license of Turbo Imager, or vice versa.
- Expedite document conversion with new Turbo Imager for near-native imaging in Turbo or ED Loader cases
- Scale functionality as needed with agent-based imaging without additional resources or 3rd party software requirements
- Produce images in original or selected time zone
- Track or cancel imaging jobs in the LAW Management Console (LMC)

USE CASE: The demand on our clients to obtain images quickly is significant which often requires the financial burden to source and maintain multiple 3rd party applications. Turbo Imager solves this issue by enabling image conversion within a single application so they can work faster and maintain fewer native applications.

Improved Bulk-Delete Options

- Improve performance of document deletion in cases using LAW Turbo Import.

USE CASE: When clients need to import data quickly, they have an increased risk of mistakes and data being ingested with the wrong information. Should the need arise to reverse unintentional imports, LAW has expanded the ability to delete thousands of files in minutes using agents, in cases using Turbo Import.

Upgraded Turbo Import File Type Library

- Increase number of supported email file types including EXIF and Metadata extraction.
- Improve email analysis (Content/body, headers, attachments, and hashing of PST/OST, MSG, Mime/eml, and ICS emails)
- Normalize language within the Turbo Import Report for greater consistency (e.g. "Import Items" are consistently called "Source Files").

USE CASE: With multiple configuration settings for file types generated by Microsoft and other 3rd party software, the LAW library has been updated to better control the type of metadata they wish to extract and the process for how it will be extracted.

Improved LAW Management Console

- Access and display the current count of active license keys from the Console the License Manager is connected to.

Release Theme for CloudNine Explore 7.6: Faster access to case summary information and the ability to preview data prior to export helps to align expectations and billing projections for more proactive case management.

Improved Report Format

- Tally file size of expected export
- Display the total of all files by count and file size (minus containers in the family) in Search Reports for both Explore Web and Desktop

USE CASE: To help inform clients with critical data summaries and what they can expect with export, the features added to Explore 7.6 improve visibility to case documents and provide insight to billing ranges for their Explore cases.

Expand API Field List

- The API will now provide access to more fields thus, reducing the drill-down navigation within the application to locate desired information.

Upgrade Import Library

- Increase number of supported email file types including EXIF and Metadata extraction.
- Improve Email analysis (Content/body, headers, attachments, and hashing of PST/OST, MSG, Mime/eml, and ICS emails)

The release of CloudNine LAW and Explore versions 7.6 also include 200+ maintenance updates and bug fixes.

Important Notes:

For further information on needed System Requirements, please see our [Answer Center](#):

Upgrade Information for Case Migrations: After upgrading to LAW or Explore 7.6, the management and case databases will also require updates. Management updates can be applied through the LAW Configuration Utility or by opening LAW or Explore. Case updates can be applied by merely opening a case, and users will be prompted before the case updates are made. No work can be done on these cases while updates are pending. Inactive or legacy cases do not require updating until work on them is necessary.
